

PrEP FOR MSM

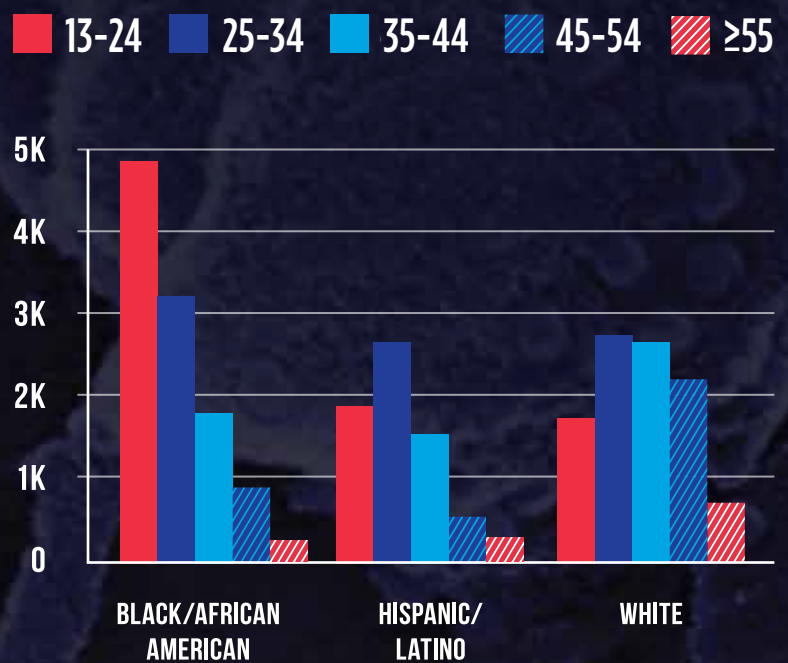

Preventing HIV in men who have sex with men (MSM) with pre-exposure prophylaxis (PrEP)

49.2K new HIV infections in the US in 2011.

Percentage of MSM:

HIV Incidence Among MSM by Race/Ethnicity and Age (US, 2010)

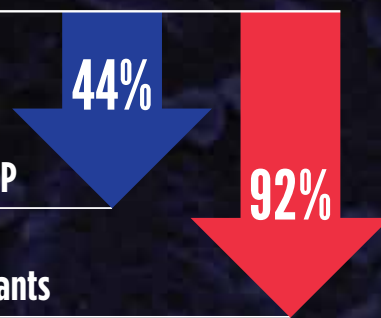

PrEP involves giving medications typically used to treat HIV to HIV-uninfected individuals to prevent HIV transmission through unprotected sex or needle sharing.

THE iPrEx STUDY: RISK OF HIV TRANSMISSION

Protection Varied with Adherence

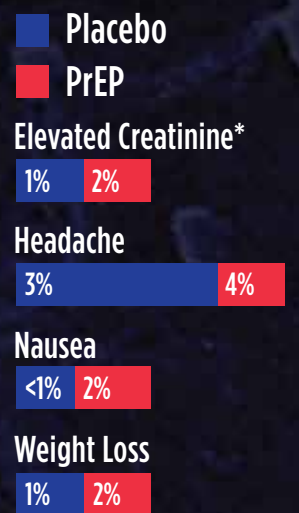

2,499 HIV- MSM & TRANS WOMEN

All Participants Prescribed PrEP

Highly Adherent PrEP Participants

Study participants were given a placebo or a combination of oral anti-retrovirals known by the brand name Truvada.

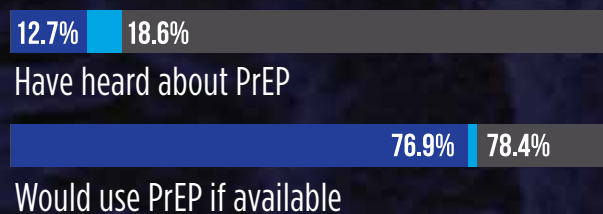

SIDE EFFECTS

*evidence of kidney dysfunction, usually reversible

ATTITUDES ABOUT PrEP

Pre-iPrEx (Blue) | Post-iPrEx (Cyan)

275,000 MSM IN THE US COULD BENEFIT FROM PrEP
